www.boschsecurity.com

- ▶ Dual thermal/optical operation
- ▶ Brushless motor technology
- ▶ Robust design
- ▶ Integrated wiper unit
- ▶ Host of mounting and viewing options

The MIC Series 412 thermal camera has been designed to offer an extremely reliable, robust, and high quality surveillance solution for security applications that demand the very best performance. Precision engineered to exacting standards, the device offers the most ruggedized dual optical/thermal image capture solution available on the market today.

Containing both a high quality optical day/night camera module and a thermal imaging module that sit side-by-side within the housing, the compact MIC Series 412 thermal camera switches between a high resolution optical camera and a high performance thermal camera at the press of a button on the control keyboard.

A 36x day/night camera is paired with the latest 50 mm un-cooled thermal imager to provide a range of enhanced viewing options, such as spectral heat variance, and hot and cold spot highlights. The thermal imager has built-in sun protection that allows the camera to self-heal should it be pointed directly at the sun. Brushless motor technology ensures ultra-reliable, whisper-quiet operation while groundbreaking resolver technology provides pinpoint accuracy, affording the user full 360° continuous rotation pan and 260° tilt control.

The MIC Series 412 thermal camera is compatible with all MIC Series connection cables, brackets, control equipment, and non-IR power supply units for ease of installation, integration, and operation.

System Overview

Examples of optical and thermal modes

Optical image / Thermal image in white hot spot mode

Thermal image in black hot spot mode / Thermal image in ice and fire mode

Thermal image in glow bow mode / Thermal image in iron bow mode

Functions

Separate optical and thermal cameras

Switch between optical camera and thermal imager at the press of a single button.

Brushless motor technology

Whisper-quiet operation and smooth control is provided through use of ultra-reliable brushless motors.

Robust design

Machined from solid aluminum, the MIC Series 412 thermal camera ensures corrosion protection by using two different processes; first an Alocrom 1200 coating, then a robust, powder paint coating. Alocrom 1200 is a chromate conversion coating of aluminum, used in the aerospace and defense industries where a protective layer is required to improve corrosion resistance. Sealed with 'O'-rings, the device can operate submerged up to 1 meter (3.3 feet) underwater by virtue of its design and construction.

Notice

The thermal camera will show no detail if submerged.

Integrated long-life silicone wiper and heater

Thanks to its integrated wiper and heater, the MIC Series 412 thermal camera is able to capture the highest possible quality image all year round, regardless of the weather.

Host of mounting and viewing options

Faultless operation, either upright or inverted, gives the user a host of mounting and viewing possibilities

Easy to use

Provides the same easy to use functionality of all MIC series cameras, including the same connection cables, brackets, control equipment, and non-IR power supply units.
