 - authorised users can configure any sentiO server over network
 - changes take effect immediately without reset
- Instant review of event history with innovative TimeLine over network
- Export video to CDROM or to any other media via network
- Displays live video from any sentiO server on network
- No additional hardware required

SENTIO-REVIEW

sentiO-REVIEW is a **software only** solution to connect to any sentiO recorder/server on a network. It runs on the reliable Windows 2000 platform. sentiO-REVIEW searches and finds any sentiO recorder on the network automatically, connects and displays any camera from any connected recorder/server. To preserve valuable network bandwidth, REVIEW requests the server to intelligently scale the images to be sent. The innovative image scaling allows REVIEW to achieve video display speeds of 25 full screen images per second (ips) over 100Mbps ethernet.

REVIEW FUNCTIONALITY

Server access from REVIEW is password authenticated. Only authorised users may change server configuration. Configuration changes take effect immediately. There is no need to reset the server.

REVIEW can receive alarms from the server. Alarms and Video Motion Detection (VMD) can be acknowledged remotely.

PTZ cameras can be controlled remotely using the on screen intuitive control menu.

CONNECTIVITY

REVIEW **Lite** can connect to single server. **Pro** connects to any number of servers on the same network and displays up to 16 cameras. **Pro** can configure servers on the network.

PLAYBACK

sentiO-REVIEW can playback up to 16 different recorded video streams simultaneously from sentiO recorders/servers on the same network. Many screen configurations enable the viewing of recorded video at different resolutions. Any camera view can be changed to full screen view with a single mouse click.

Playback has simple controls. Video can be played back at the originally recorded speed or at x2, x4, x6, x8 of recorded speed. There are also freeze-frame, single frame advance controls allowing detailed view of a scene. Fast Forward and Fast Reverse buttons allow easy video search.

Recorded video can be searched for specific periods by date and time, contact alarms, for motion alarms.

VIDEO EXPORT

sentiO-REVIEW can receive video from any connected server and then export the clips onto writeable CD. Video player may be exported together with images. Exported video may then be viewed on any PC with a Windows 98, NT or 2000 operating system without any additional hardware or software.

IMAGE AUTHENTICATION

sentiO-REVIEW can check image integrity. Images that are tampered with do not display date & time during playback, clearly indicating failed authentication. This feature is also available on exported images.

REVIEW Pro

sentiO REVIEW Pro is a fully featured network view and playback software. It can connect to multiple hosts. Pro can remotely configure any connected machine. Video clips may be exported to CD on the remote unit. It can also remotely control cameras through its network PTZ controller software.

REVIEW lite

Lite connects to a single sentiO recorder on the network. It allows the user to view live video from remote server and can also display playback images.

SYSTEM SPECIFICATIONS

REVIEW requires a minimum of 800MHz PIII with 128MB RAM with Windows 2000/XP operating system.
