- incl. audio input / output (stereo)
- picture display normal or reverse (R / N)
- incl. 230 V power plug
- 162 x 133 x 54 mm (W x H x D)

Description

The TFT-56 monitor is a high quality colour LCD monitor, ideal for stationary and mobile use. Due to its rich in contrast picture display the monitor is ideally suitable for mobile applications (e.g. in vehicles).

Naturally, stationary applications (e.g. at the till with no place for common-sized monitors) are among the range of applications as well.

The monitor comes with foldable stance so that it can be placed on a plane service with a viewing angle of 30°. On the rear side it has a standard 1/4" thread for optional mounts.

The unit makes use of an external power supply unit, thereby eliminating the problems with hums for stationary applications. All cables necessary for monitor connection are included in the scope of delivery.

At the monitor itself you can carry out following adjustments:

- Brightness
- Contrast
- Volume
- Screen Display Switch (R / N)

As stand-alone unit the monitor is also suitable for mobile use in vehicles, especially with regard to the screen reversing facility.
